CORROSION AND CORROSION PROTECTION

CORROSION AND CORROSION PROTECTION We begin our study of engineering materials with the subject of corrosion and how we can protect against it Corrosion is one of the principal ways in which metallic materials fail, and it is one of the best understood Moreover, it is commonly treated in introductory courses in chemistry, so we can start here by building on the experience of most students

CORROSION PROTECTION METHODS

Corrosion inhibitors offer corrosion protection that is similar to coatings as they act as a barrier between the oxidizing agents and the metal surface The inhibitor adsorbs onto the steel surface and slows down or eliminates one or more of the electrochemical

reactions by blocking the reaction site The degree of protection that a corrosion inhibitor provides is heavily dependent on the

Corrosion Protection.ppt [Read-Only]

Methods of Corrosion Control Barrier Protection Provided by a protective coating that acts as a barrier between corrosive elements and the metal substrate Cathodic Protection Employs protecting one metal by connecting it to another metal that is more anodic, according to the galvanic series Corrosion Resistant Materials Materials inherently resistant to corrosion in certain environments

Guide to protection of steel against corrosion

New corrosion protection systems are constantly being developed and put on the market That those systems are not included in this guide says nothing about their performance The explanation is that these systems are continuously under development or that there are no existing practical guidelines for them 14 Environmental regulations Attention is drawn to the fact that the environmental
