### **Learning to Represent Student Knowledge on Programming ...**

The deep learning model trains on a student's history of past code submissions and predicts the student's future performance on the current or the next exercise. The model is able to learn meaningful feature representations for a student's series of submissions and hence does not require manual feature selection, which would be very difficult for open-ended exercises. Furthermore, the learned **Machine Learning For Dummies®, IBM Limited Edition**

Machine learning is a form of AI that enables a system to learn from data rather than through explicit programming. However, machine learning is not a simple process. Machine learning uses a variety of algorithms that iteratively learn from data to improve, describe data, and predict outcomes
