Factory Physics by Hopp and Spearman Most factory production measures are about time production rate: how much is made in a given time lead time: how much

time before delivery cycle time: how much time a part spends in the factory delivery reliability: how often a factory delivers on time capital pay-back period: the time before the company get its investment back 2852

Physics at Super Factory - arXiv

physics implies, however, that this is not the only way In fact, before its discovery, the existence of the charm quark was postulated to explain the smallness of strangeness-changing neutral currents (the Glashow-Illiopolous-Maiani (GIM) mechanism [1]) The third family of quarks and leptons was predicted by Kobayashi and Maskawa to explain the small CP violation seen in kaon mixing [2

in Factory Physics is to understand the underlying causes

of time and flow variability mainly caused by non-transformation stages of production eg waiting, moving, inspection etc (Gilbreth and Gilbreth, 1922), and to characterize the effects of this variability in the overall production process Hopp and Spearman (2001) developed a set of laws that govern how flow systems behave by means of
