Verifying Trigonometric Identities

Verifying Trigonometric Identities Objective: To verify that two expressions are equivalent That is, we want to verify that what we have is an identity • To do this, we generally pick the expression on one side of the given identity and manipulate that expression until we get the other side • In most cases, it is best to start with the more complex looking side and try to simply to

LESSON 6: TRIGONOMETRIC IDENTITIES by Thomas E. Price ...

17082001 · Trigonometric identities can also used solve trigonometric equations Equations of this type are introduced in this lesson and examined in more detail in

Lesson 7 For student's convenience, the identities presented in this lesson are summarized in Appendix A 2 The Elementary Identities Let (x;y) be the point on the unit circle centered at (0;0) that determines the angle θ : Recall that

VERIFYING TRIGONOMETRIC IDENTITIES

The basic trigonometric identities consist of the reciprocal identities, quotient identities, identities for negatives, and the Pythagorean identities • These identities were introduced in Chapter 5 Section 2, however in this chapter we are going to review the basic identities and show how to use them to determine other identities • The following slides consist of the basic identities
