Water Distribution System - KFUPM

Water Distribution System system, since it can furnish a supply to any point from at least two directions • The branching system has dead ends, therefore, does not permit supply from more than one direction Should be avoided where possible • In locations where sharp changes in topography occur (hilly or mountainous areas), it is common practice to divide the distribution system into

The London water supply industry and the Industrial Revolution

water supply was anomalous as compared to other cities in Europe which were much smaller The industry developed in Britain in part due London's status as a commercial hub and the existence of a large and wealthy market for water Joint-stock financing was also important for water companies Finally, this history shows the existence of technological inventiveness outside the traditional
